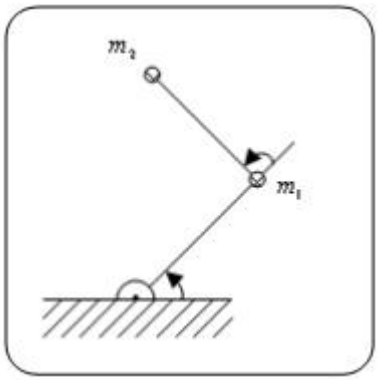
MMC Homework 5

The current configuration of a Two link manipulator is given below as you can see the class material for chap. 6.

mass parameter $m_1 = 5\text{kg}$, $m_2 = 5\text{kg}$, $l_1 = l_2 = 0.5m$



$$\theta_1(0) = 30^\circ \quad \theta_1(t_f) = 150^\circ \qquad t_f = 2\,\text{sec}$$
$$\dot{\theta}_1(0) = 0 \quad \dot{\theta}_1(t_f) = 0$$
$$\theta_2(0) = 120^\circ \quad \theta_2(t_f) = 30^\circ$$
$$\dot{\theta}_2(0) = 0 \quad \dot{\theta}_2(t_f) = 0$$

1) Do trajectory planning with a linear functions with parabolic blends for the two joints of the manipulator.

2) Find the required $\tau(t)$

3) As a Dynamic simulation, apply the obtained $\tau(t)$ to find $\theta(t)$
